Nash allocations under power-mean objective | $K = 2$, $w = [1/3, 2/3]$, $N = 20$ **firms,** $f(x) = \log x$
circles = Nash; stars = proportional; dashed = proportional ray

$p = 1$
(arithmetic/current)
SW=0.9729 (0.33–0.33 dim-0 share)

$p = 0.5$
SW=0.9729 (0.33–0.33 dim-0 share)

$p \to 0$
(geometric/product)
SW=0.9729 (0.33–0.33 dim-0 share)

Nash
Proportional

$p = -0.5$
SW=0.9729 (0.33–0.33 dim-0 share)

$p = -1$
(harmonic)
SW=0.9729 (0.33–0.33 dim-0 share)

$p = -2$
SW=0.9729 (0.33–0.33 dim-0 share)
