$\Sigma_{i,k}$ vs $w_k f'(B_i w_k)$ vs product — all normalized to 1 at $w_k^{\min}$
(shows Σ is nearly flat while g and the product vary substantially)
$\log(x+100)$
Σ varies 0.0%, g varies 2816%
$\sqrt{x}$
Σ varies 8.9%, g varies 448%
$1-e^{-x}$
Σ varies 2.5%, g varies 307%
Normalized value (= 1 at $w_k^{\min}$)
w_k
$\Sigma_{i,k}$
$w_k f'(B_i w_k)$
Product
